

Same-day delivery at the price of
ground. **No warehouses.**

If the package starts 500 miles away, same-day or 1 day is either impossible or very expensive

GROUND

\$17.09

3-5 DAYS

2ND DAY AIR

\$35.98

2 DAYS

NEXT DAY AIR

\$109.01

1 DAY

SAME DAY

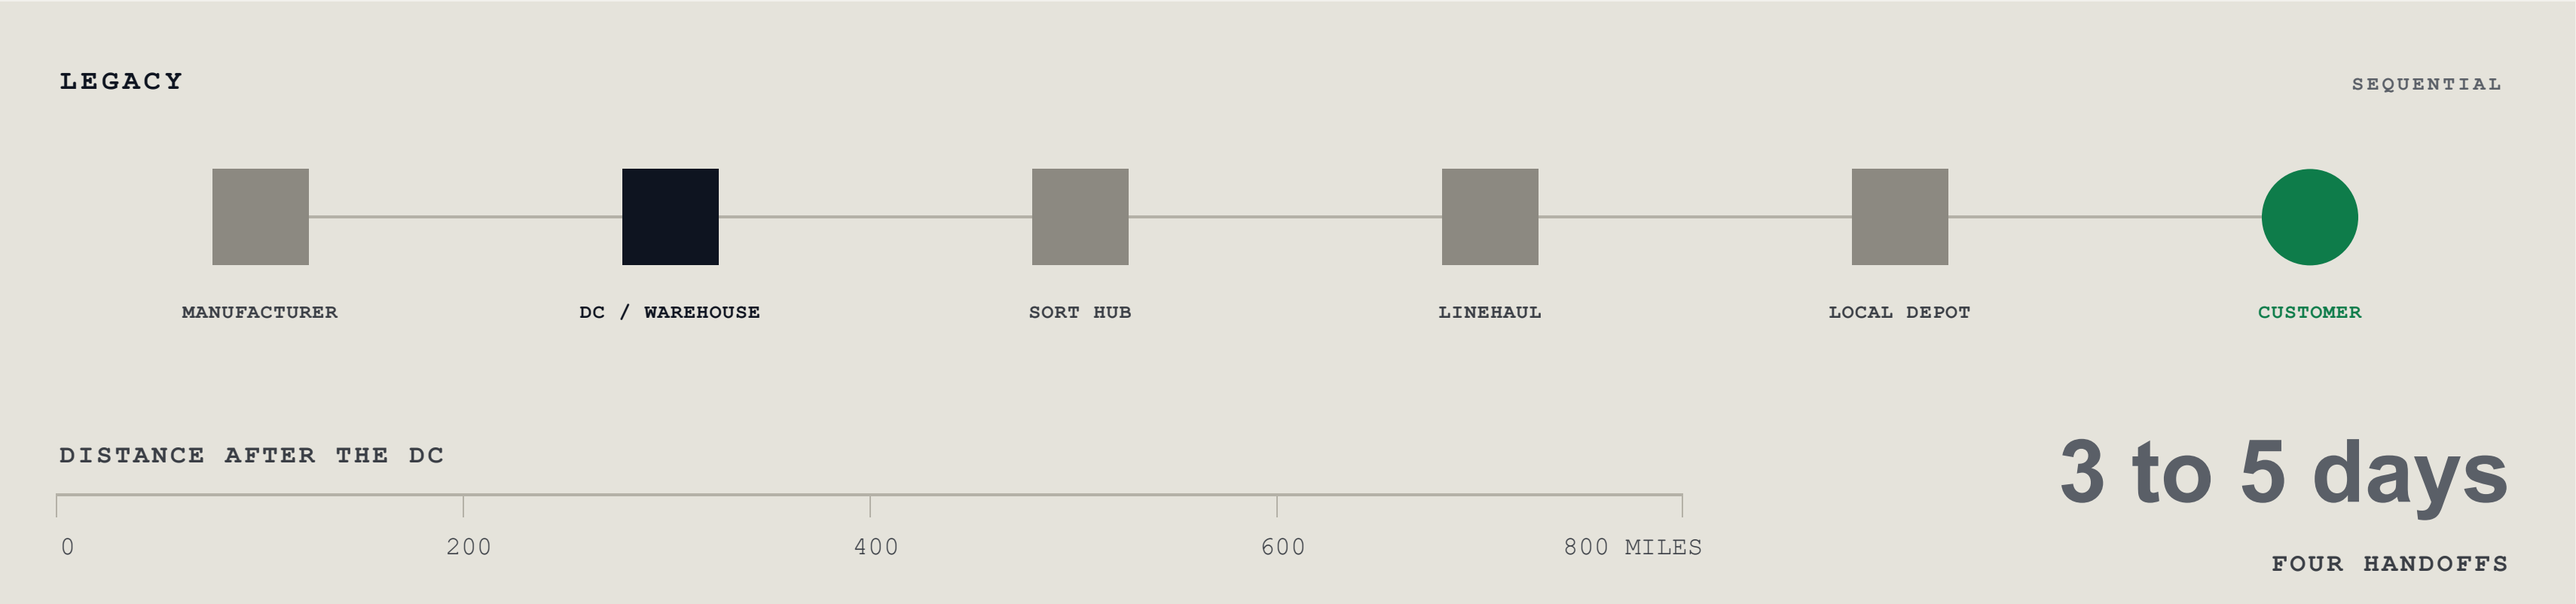

NOT OFFERED

Brands already spend \$9 to \$12 all-in to ship a parcel that takes three to six days.

Thanks to Amazon, shoppers now expect Prime delivery speed from brands

The legacy logistics model

Brand keeps all their inventory in one centralized warehouse within the United States

A shelf and a scanner inside a local business that is already open.

The local business termed a Node, already pays the rent and already has someone behind the counter. We pay for the small amount of space and work needed for warehousing and fulfillment.

WHO CAN BE A NODE

RETAIL · COMMERCIAL · RESIDENTIAL

2008

Sold spare bedrooms

2009

Sold idle cars

2026

Sells idle commercial space

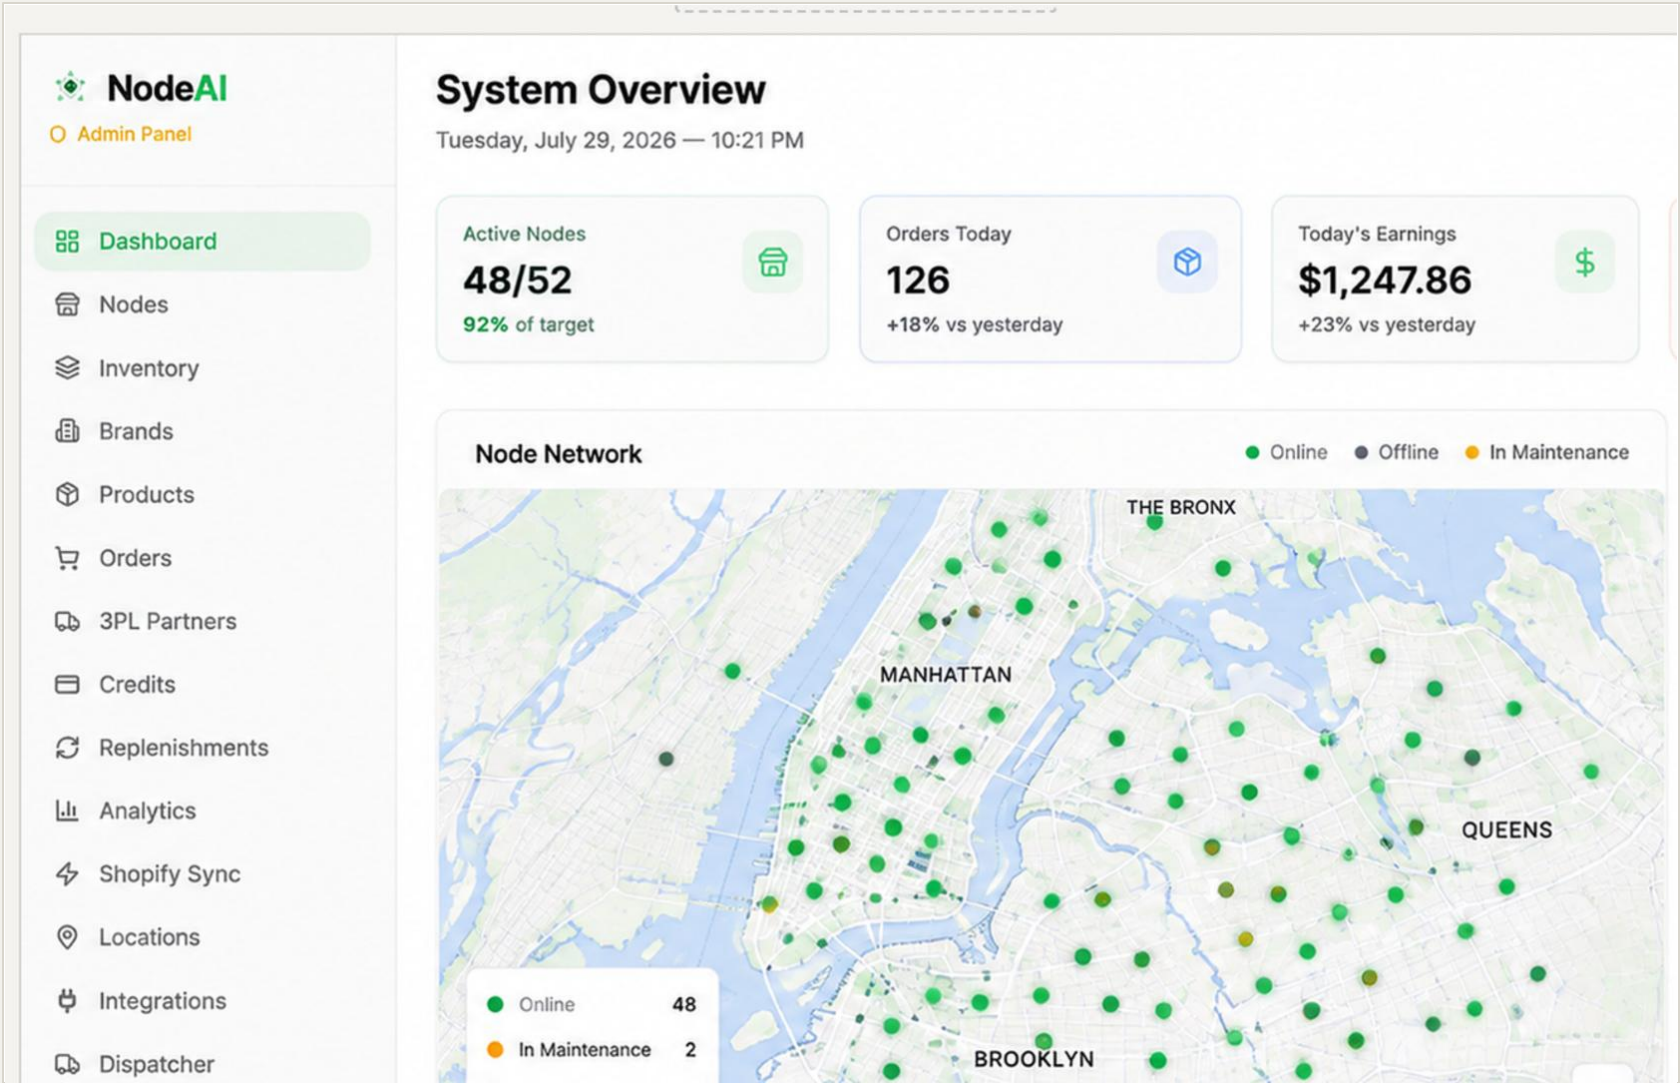

Airbnb sold spare bedrooms and Uber sold idle cars. The spare capacity here is space that is turned into micro-warehousing.

Node turns a hundreds-of-miles fulfillment problem into a one-mile delivery.

THE NETWORK MODEL

THE OPERATING SYSTEM · BUILT AND LIVE

DISPATCHED AND DELIVERED

Order delivered

Delivered Wednesday, Jul 29 at 11:36 PM

(26 minutes from pickup)

Service

NodeAI Same-Day Delivery

Order reference

NodeAI Order #1042

Delivered to

83-22 41st Ave

Elmhurst, NY 11373

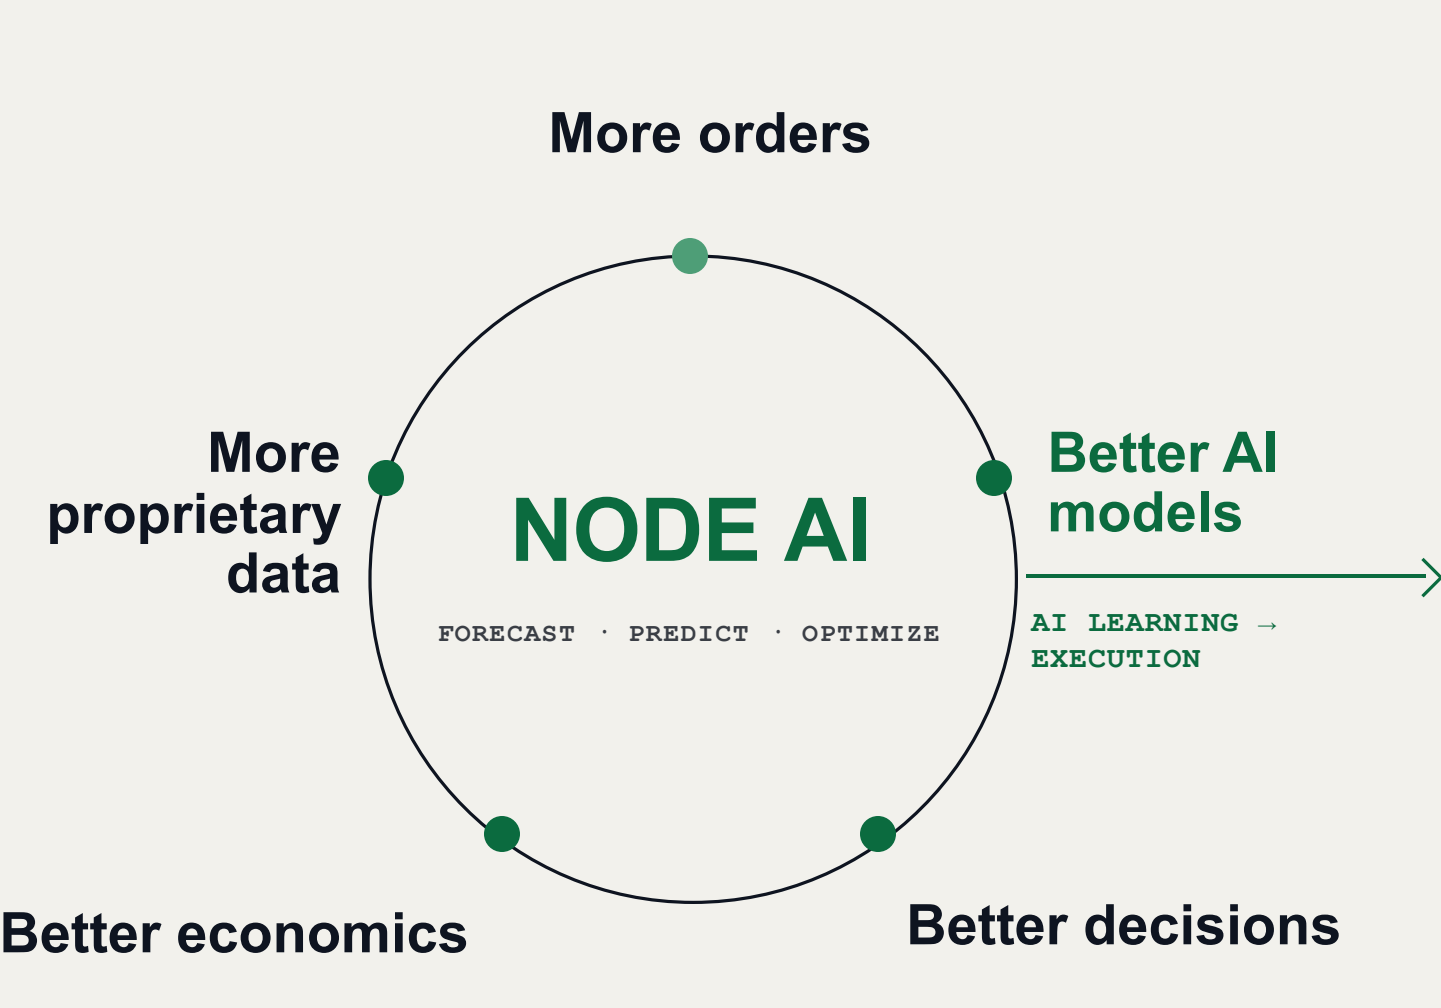

(1.2 miles from pickup)

The system is built, it works, and the Shopify app is live for any ecommerce store to plug into Node.

Every order makes the network smarter.

Node AI learns from every order to improve inventory, network growth and delivery execution.

THE LEARNING LOOP

HOW NODE AI DECIDES

NETWORK PLANNING · BEFORE THE ORDER

01

Inventory placement

Right SKU. Right place. Before demand.

02

WHERE THE NETWORK GROWS

Node expansion

Add capacity where it creates the most value.

ORDER EXECUTION · AFTER THE ORDER

03

Courier orchestration

Best courier for cost, performance and SLA.

04

Delivery execution

Optimize Node, timing, speed and margin.

HIGHER UTILIZATION → LOWER COST → BETTER SERVICE → STRONGER MARGINS

Neither side has to change much.

NODE

\$2.00 per pick

Space they are already renting, staff already on shift

They store our sealed packages and hand them off. No picking units, no packing, no labels

Minutes of counter work per order

No hires and no buildout beyond a shelf and a mobile-app scanner

BRAND

Transaction pricing from order one.

Same-day paid out of the fulfillment budget they already have

Their current 3PL stays exactly where it is

The brand keeps the customer and the order data

No change to how the brand sells or packs

Ohi & Darkstore ran similar ideas but failed due to core structural differences

	 / 	NODE
Placement decided from	Estimates made before a site opened	An existing geocoded order file
When you learn you were wrong	After the lease and the staffing	Before the shelf is stocked
What the site does	Receives, picks, packs, labels	Stores sealed units, hands them off
How density is reached	Add sites, then find demand	Add markets & nodes based on existing demand
Weight class	Dedicated facilities per metro	A shelf inside a business already open

Independent brands are already buying same-day on their own storefronts through a company called Gently.

LA, 2023

ONE METRO, THREE YEARS IN

GENTLY

NODE

Space and labor

A warehouse, W2 drivers on payroll and a company EV fleet

A shelf inside a business already open, staff already on shift, couriers bought per run

Growth

A new city means new infrastructure

A new city requires onboarding new nodes, and brand client order data tells us which neighborhoods to prioritize

Contribution positive from the first order.

MODELED

1 · GROSS REVENUE

WHAT THE BRAND PAYS

Gross revenue per order · \$11.80

2 · NET OF TRANSPORT PASS-THROUGH

PASS-THROUGH NETTED OUT

Courier · \$6.50 base · \$6.01 at maturity

Revenue net of transport · \$5.30 rising to \$5.79

BATCHING: ONE COURIER RUN · TWO NEARBY ORDERS · \$6.01 BLENDED AT A 25% BATCH RATE

3 · CONTRIBUTION AFTER HOST PAYOUTS

THE OPERATING PROOF

Host pick · \$2.00

Insurance and damages · \$0.30

Contribution · \$3.00 rising to \$3.49

COUNTER PICKUP · PILOT

EVERY SEGMENT LABELED · ASSUMPTIONS IN A2 · CONTRIBUTION RISES WITH BATCH RATE, NOT NODE COUNT

No courier leg at all. Year 1 pilot on 5 of 20 to 25 nodes. \$4.65 gross, \$2.35 contribution.

A mature NYC network has a Node within one mile of every order.

Nodes in NYC increase as brand demand & order volume scale. Each one shortens the average trip, which cuts the courier bill and lifts contribution on every order that follows.

STAGE	BRANDS	NODES	AVG TRIP	ORDERS / MO	CONTRIBUTION	GROSS RUN-RATE
Year 1 footprint	25	22	3.0 mi	~4,000	\$3.00	~\$0.6M
Loading	~60	45	2.4 mi	~18,000	\$3.81	~\$2.5M
Densifying	~120	145	1.4 mi	~94,000	\$4.90	~\$13M
Metro maturity	~220	400	0.8 mi	~400,000	\$5.66	~\$57M

Metro Maturity =

<1%

OF NYC PARCEL VOLUME

~4.8M NODE ORDERS / YEAR AT MODELED MATURITY

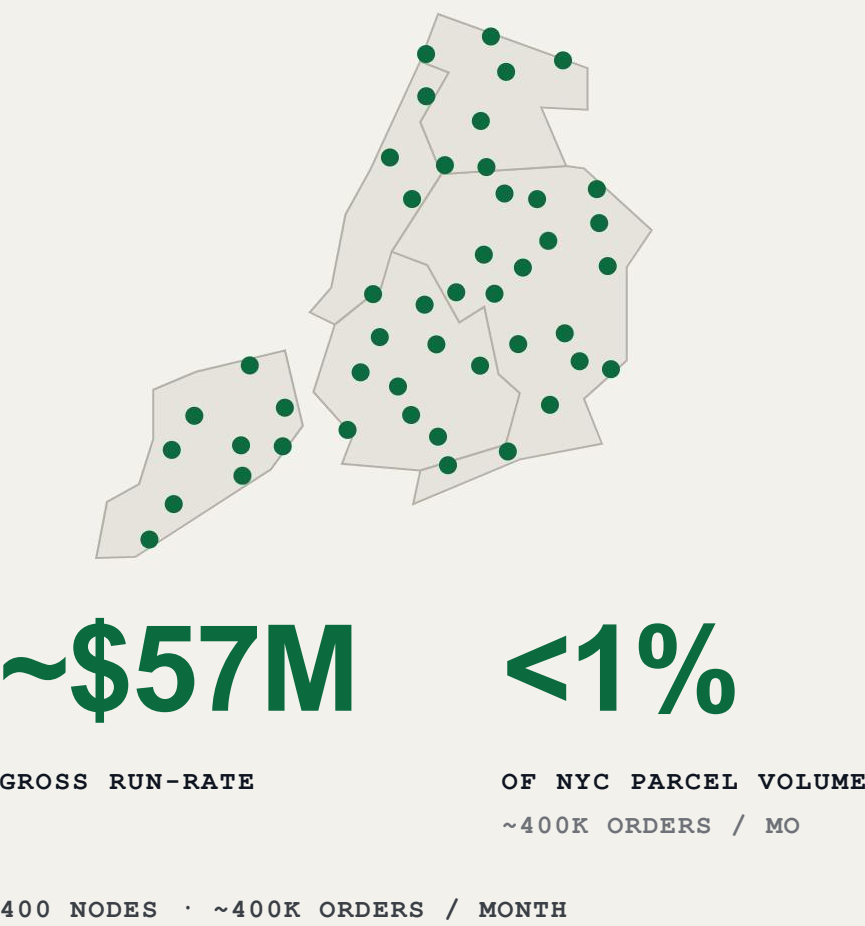

Prove New York. Replicate the network.

Node opens markets from existing demand, not speculative infrastructure.

THE BLUEPRINT

New York City

MODELED METRO MATURITY

THE PLAYBOOK

- 01 Read demand
BRAND ORDER DATA
- 02 Place nodes
WHERE DEMAND EXISTS
- 03 Place inventory
RIGHT SKU · RIGHT LOCATION
- 04 Launch
SAME-DAY AT CHECKOUT

THE NEXT MARKETS, RANKED BY OUR OWN ORDER DATA

METRO	NODES	ORDERS / MO	PICKS / NODE	GROSS RUN-RATE
New York	400	400,000	1,003	\$56.6M
Los Angeles	268	171,000	640	\$24.3M
Chicago	187	101,000	540	\$14.3M
San Francisco	127	95,000	746	\$13.4M
Washington DC	172	86,000	501	\$12.2M
Philadelphia	169	85,000	501	\$12.0M
Boston	169	85,000	501	\$12.0M
Dallas	147	84,000	572	\$11.9M

Twenty-one metros. 2,787 nodes. \$258M gross run-rate.

The sequence is computed from order history

No warehouse required to open the next market.

Every proven market makes the next one easier to open.

Logistics. Software. Distribution.

The idea came out of ten years of running a 3PL.

LOGISTICS

Elor Kahalany

CEO · FOUNDER, LOGYSTICO

More than ten years running Logystico, a profitable Newark 3PL: receiving, storage, pick and pack, carrier costs. Node started with something he kept seeing in his own order file, packages traveling hundreds of miles to customers who lived minutes from usable commercial space. He brings the order history to model against and a roster of brand relationships already willing to run a pilot.

SOFTWARE

Alex Groysman

HEAD OF PRODUCT

Co-founder and early hire at several technology startups with exits, and two decades building enterprise systems, most recently as Head of Ad Product Development at DirecTV. Named inventor on multiple patents. He has spent his career on real-time allocation problems in software, which is the same problem Node is solving in physical space. He built the Shopify app and the courier integrations before we raised anything.

DISTRIBUTION

David Nyurenberg

HEAD OF REVENUE

More than a decade selling data, advertising and technology to brands, including four years running his own company. He has spent that time explaining complicated systems to the people who have to budget for them. He has also spent years watching DTC brands pay to acquire a customer and then lose that customer's next order to Amazon because it arrives tomorrow. He owns brand sales.

● WE ARE RAISING

\$3.5M

This round will allow us to scale and prove out the Node model in New York City

SEED · 24 MONTHS · NEW YORK AND NORTH JERSEY

USE OF FUNDS

Network build: hosts and field ops	\$600,000
Working capital and courier float	\$250,000
Engineering and technology	\$1,250,000
Brand sales and marketing	\$800,000
Overhead	\$600,000

End
